

I differ from the ARRL's proposal in the following ways:

1. Make all General class and Advanced class privileges the same so that the Advanced class may be phased out. Not just on 80, 40 and 15 bands, but 20 meters as well, essentially on all amateur bands.
2. Make all Novice and Tech Plus privileges the same so that the Novice class may be phased out. This would be done by granting Novice class licensees all amateur privileges above 30 Mhz.
3. Allow Novice and Tech plus, ALL amateur allocations on 10 meters which will allow them access to the 10m FM segment and hopefully reverse the tendency by ALL license classes to crowd into the present Novice/Tech Plus allocation.
4. Increase the phone allocations on 15m band to allow General class and up access to 21.200-21.300 MHz segment which is the satellite uplink frequencies on 15 meters.

I am an amateur service licensee holding AC5DK and been licensed over 25 years. I feel these changes are in the best interest of the amateur service.
